Instruction for modules updating in the ERIC program

- Insert ERIC Desktop DVD of the version 07/2009 into DVD drive.
- Start the ERIC Desktop program (if you already run the program, you must quit it and start it again to release all modules from memory. Then you can follow next steps).
- Select the menu item Services / Modules update.
- In a dialogue box set path to directory „Modules“ on that DVD. This can be done by means of „Drive“ combo box, which contains a list of drivers that are connected to your PC.
- By pressing the „Select“ button, run the modules updating and follow the updating procedure instructions.
- In order to verify whether the update was done correctly you can compare the numbers of modules versions (in the „Help / About modules / About program“ menu item) with the version numbers in this bulletin.

In case that you have received a new module into your license, you should do the standard update twice. Otherwise the new module will not work. (During the first update, the data in license will be changed and during the second update the corresponding module will be copied to your PC according to the mentioned license).
